Correction of: <https://aging.jmir.org/2023/1/e42437>

JMIR Aging 2023;6:e54952; doi: [10.2196/54952](https://doi.org/10.2196/54952)

In “Identifying Predictors of Nursing Home Admission by Using Electronic Health Records and Administrative Data: Scoping Review” (*JMIR Aging* 2023;6:e42437) the authors noted one error.

In the originally published manuscript, some percentage values in Table 2 were listed incorrectly. The corrected version of Table 2 appears as follows:

Table 2. Outcome measures used in the selected studies beyond nursing home admission (N=37^a).

Secondary outcome	Outcome reported, n (%)
Mortality	16 (43)
Hospitalization or rehospitalization	11 (30)
Discharge from home and home-based services or recommendations to live in the community	4 (11)
Functional measures (quality of life, activities of daily living, and mental well-being)	4 (11)
Discharge to any health care institutions other than a nursing home (eg, rehabilitation center)	2 (5)
Other long-term care service use	1 (3)
Emergency department visit	1 (3)
Disability	1 (3)
Onset of 5 important chronic conditions	1 (3)
Nursing care needs	1 (3)
Time of death	1 (3)
Fall incidence	1 (3)
Health and social service costs	1 (3)

^aMore than 1 outcome measure was reported from individual studies. Therefore, N was greater than the number of selected studies.

The originally published version of Table 2 is included as [Multimedia Appendix 1](#).

The correction will appear in the online version of the paper on the JMIR Publications website on December 19,

2023, together with the publication of this correction notice. Central, and other full-text repositories, the corrected article Because this was made after submission to PubMed, PubMed has also been resubmitted to those repositories.
